（欢迎大家指正翻译错误。我们将在以后的版本中修正指出的错误。）

# Linux Bash Shell Cheat Sheet

(works with about every distribution, except for apt-get which is Ubuntu/Debian exclusive)

## Legend:

Everything in "<>" is to be replaced, ex: <fileName> --> iLovePeanuts.txt

Don't include the '=' in your commands

'..' means that more than one file can be affected with only one command ex: rm  
file.txt file2.txt movie.mov .. ..
